                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New mammalian soluble interferon alpha-receptor forms - used for inhibiting, modulating or modifying the activities of interferon(s) Disclosure; Fig 7; 40pp; English.

Human transmembranal interferon alpha receptor (IFNAR) (W21804) includes a 21-amino acid transmembrane region. Novel, splice-deleted IFNAR forms 1 (W21805) and 2 (W21806) have been detected that lack this transmembrane domain. These, soluble non-membrane bound polypeptides can be expressed in host cells and used to inhibit, modulate or modify the activities of interferons alpha and beta in cells, tissues and organisms, or for diagnostic
                                                                                                                                                                          421

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                from human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms 1 and 2 (see also W21806) probably regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating the activity of the multiple IFN subtypes. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNs alpha and beta in cells; tissues and organisms, or for diagnostic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (W21805) is characterised by a new domain (S) which totransmembranal end-deleted extracellular domain when compared to transmembranal in the end of transmembranal end-deleted extracellular domain when compared to transmembranal end-deleted extracellular domain when compared to transmembranal end in transmembrane domain. The amino active sequence is predicted from a cDNA clone (see also T73520) obtd. sequence is predicted from a cDNA clone (see also T73520) obtd.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New mammalian soluble interferon alpha-receptor forms - used for inhibiting, modulating or modifying the activities of interferon(s) Example 2; Fig 7; 46pp; English.
                                                                                                            Spliced-deleted interferon alpha-receptor Interferon alpha-receptor; IFNAR.
                                                                                                                                                                T 11

The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a cDNA clone (see also T73521) obtation of the sequence is predicted from a cDNA clone (see also T73521) obtation in the sequence is predicted from a cDNA clone (see also T73521) obtation in the sequence is predicted from a cDNA clone (see also T73521) obtation in the sequence of the sequ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AU9475977-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc encoding CREM4, both operably linked to dentify agonists/antagonist of Cells containing (I) may be used to identify agonists/antagonist of CC IL-10. Agonists are potentially useful, e.g. for preventing allograft CC inflammation, autoimmune disease and septic shock, while antagonists are potentially useful for treatment of photosensitivity. CC viruses, bacteria and parasites (especially intracellular pathogens) and CC restore, e.g. by gene therapy, IL-10 sensitivity to a cell that expresses CC signal. Antisense CREM4 sequences (especially ribozymes), can inhibit CC signal. Antisense CREM4 sequences (especially ribozymes), can inhibit CC ragments of (I) are used as primers or probes to assay CREM4-specific CC RNA. Agonists/antagonists may be administered parenterally, orally or allograft.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The IFN-gamma receptor beta-subunit encoded by a cDNA clone deriver mouse B-cells is given in R75782. Recombinant beta-subunit, pref. with the transmembrane anchoring domain deleted or linactivated and with the cytoplasmic domain deleted, may be many be made to the complete of the complete of the cytoplasmic domain deleted, may be many be made to the cytoplasmic domain deleted, may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (HEMM/) HEMMI S.
